Enhancement of efficiency in monocrystalline silicon solar cells Jinyue Mao School of Physics, Shandong University, Jinan, 250100, China 202100101152@mail.sdu .cn

The voltage and current of the cell determines the power of the cell. In monocrystalline solar panels each module is made from a single silicon crystal. This makes them more efficient, though more expensive than the newer and cheaper thin-film and polycrystalline solar panel. It is easy to recognize which panel is a monocrystalline solar panel ...

Current high-efficiency silicon solar cells combine a thin silicon oxide layer with positive charges with a layer of SiN_x:H for n-type Si or with negative charges with a layer of Al₂O₃ for p ...
