

A hole was drilled into the lead-acid battery screw

I tried dipping baking soda & water but the screw head is stripped. I could drill a hole to remove it, but I'm scared of sparks triggering something bad in the battery. How can I safely remove it? ...

In certain models of older Corvettes (C3's, if memory serves), you could drill a hole through the side of the car fender and drain one of the battery cells. This would allow the ...

I have a 12 volt car battery 100AH. There are many indications that it has a bad cell. But because it is a maintenance-free battery, it is not possible to ent...

Drilling into a battery post can cause the battery to leak acid, which is highly corrosive and can be harmful to your skin and eyes. It can also cause the battery to explode, ...

Used to drill, and weld, battery terminals and cables all the time when I worked on electric/hybrid vehicles back in the '70s. Definitely use a variable speed drill, and go slow. Lead will grab the bit big-time, and rip the drill ...

Drilling a rather larger hole should solve the problem. If the lead/acid battery is used in a teacher demonstration, or as one activity in a circus, it would be sensible to protect participants by use ...

With regards to physically destroying drives by drilling a hole: That will prevent normal usage, resale and refurbishing. In many cases that may be sufficient, but while drilling a ...

he even showed me his car battery. sure enough the lid was originally glued on. he pried the lid off with a chisel. seems kind of dangerous but anyways there were screw ...

If you really want to go the route of getting it from a battery, first is that you don't want an AGM or Gell type. Your picture is an AGM type. You want a flooded type battery. Second, getting it ...

I just moved into a place in California that historically had lead paint used but has since been covered with new paint from what the landlord said. I want to hang up a large mirror, but it can ...

To drill a hole for lag screws, you will need the following tools: Power Drill: A power drill is necessary to create the hole in the material. It is recommended to use a drill with ...
