In other words, the battery energy storage system occupies all the newly-built capacity selected in Belgium's recent capacity compensation mechanism (CRM) auction. This is the first time that two auctions are held simultaneously, namely the last auction in the 2025-2026 delivery year (Y-1) and the first auction in the 2028-2029 delivery year (Y-4).

This plan includes building new energy storage capacity and delivery routes, sharing available energy supplies across borders, reducing reliance on single or dominant energy suppliers, and increasing competition in a liberalised energy market.

This Energy Policy Survey is the first comprehensive review of energy policies and strategies in the Western Balkan region, and also covers important cross-cutting topics such as co-operation and energy trade, oil and gas transportation, and the links between energy and poverty.

Highlights o State of the art of technology and application of pumped hydro and battery storage systems. o Overview of the installed electricity storage capacities in Western Balkans. o Method for cost calculation of electric energy storage. o Economic analysis of reviewed pumped hydro and battery storage technologies. o

Supreme Decree No. 70 of 2023 (DS 70) has been recently approved, modifying Supreme Decree No. 62 (DS 62), which regulates the capacity payment, also called sufficiency power, in Chile. This modification introduces significant changes in the recognition and compensation of energy storage systems and hybrid plants with storage capacity. Recognition ...
