

Do I need a battery cross reference guide?

While this may sound quite complicated, it does not have to be. You can use a battery cross reference guide. The chart is extremely easy to use. All you need to do is find the battery brand and then locate the battery model. The equivalent battery will be listed at the start of the row.

How are the battery models listed in each column?

In the Battery Cross Reference for Button Cell Batteries, each column lists one or more manufacturer and each row lists the equivalent battery models for each manufacturer. The last two columns are named by the International Electrotechnical Commission (IEC).

What is battery cross referencing?

Battery cross-referencing is the process of identifying compatible batteries from different manufacturers or for different applications. It's a critical skill in various industries, especially in automotive and consumer electronics, where the right battery not only ensures device functionality but also prolongs its lifespan.

What is a rechargeable coin or button cell battery?

In recent years, rechargeable coin or button cell batteries have been introduced with a nominal voltage between 3.6 to 3.7 volts. While the capacity of these batteries is much lower compared to non-rechargeable batteries, they can be charged/discharged several times.

What determines the open circuit voltage & capacity of a battery?

The open circuit voltage and the capacity of battery depends on what it's made of, i.e. its formulation. This table lists the various formulations and the IEC letter used to indicate them. Please note that the positive electrode chemicals listed in the table below have hyperlinks linking to their related Wikipedia article. [Home](#) | [Tables](#) | [General](#)

How do I find a compatible battery?

To find a compatible battery, begin by noting the specifications of your current battery - these include voltage (V), capacity (mAh or Ah), size, and terminal type. Cross-reference these details with online databases, which often have extensive listings of compatible battery models from various manufacturers.

The papers mostly concern Gordon's command of the 11th Siege Battery of the Royal Garrison Artillery and include Battery log books, copies of Battery correspondence, a history of the Battery, photograph album, training materials, notes and engagement diaries. Dates: 1896-1977.

These additional terms help to model battery nonlinearities. The correspondence of these RC circuits to actual battery chemical phenomena is only notional. In the equivalent circuit model, some of the components were made to vary according to the bulk charge stored in C_b. The State of Charge (SOC) is an estimate of the battery bulk charge.
