

What information should be included in a battery passport?

The battery passport must contain information on: Identification of the battery in the form of a unique identifier. Basic characteristics of the battery including type and model. Statistics on performance and durability must also be updated over the battery lifecycle by parties conducting repair or repurposing of the battery.

What is the battery Passport content guidance?

The Battery Pass project exists to advance the implementation of the battery passport in Europe and beyond. That's why we published the Battery Passport Content Guidance in 2023. On this page, we will answer the top 10 questions about the battery passport and how your business can prepare, so keep checking back.

What is a battery passport?

A battery passport is a document that stores relevant battery data throughout the entire battery lifecycle, containing detailed information about a battery's production, testing and recycling. It is designed to ensure that batteries comply with the Battery Regulation Amendment, as well as to provide a record of the battery's history.

Do EV batteries need a passport?

By 1st February 2027, all EV and industrial batteries on the EU market will require a unique battery passport. Information on the battery is to be retrieved using a QR code, and must include performance classification for carbon impact, electrochemical performance, and durability requirements.

What are the requirements for selling batteries in the EU?

The Battery Regulation requires many other criteria to be met to sell batteries in the EU, including the reporting of a carbon footprint declaration, recycled content percentages, as well as human rights and battery supply chain due diligence obligations throughout the battery value chain. Here are some of the main requirements that must be met:

What is a battery serial number?

Identification: A unique serial number which must be clearly visible on the battery and cannot be easily altered. Basic characteristics: Information on production date, battery type and model, chemical composition, and intended use.
