

How can a battery manufacturing company avoid cost overruns?

To avoid delays and cost overruns, companies need to consider sourcing--particularly battery manufacturing equipment and raw materials--during construction and production operations. All aspects of the battery value chain are expected to grow rapidly through 2030, with cell production and material extraction being the largest markets (Exhibit 2).

Why did the battery industry's operating rate fall in November?

TrendForce's latest investigations reveal that the battery industry's operating rate fell in November due to a significant cooling in end-user demand. Falling prices of key raw materials like lithium, cobalt, and nickel led to a consistent downward trend in battery cell prices.

Will the battery industry break even next year?

The battery industry is in the middle or late stage of a market clearing and is expected to break even and turn profitable next year, according to Sealand Securities.

Why is the EV & storage market slowing down?

TrendForce noted a slowdown in demand for the EV and storage market. To reduce inventory, battery cell suppliers have decreased their capacity utilization rates, leading to an overall industry operating rate falling below 50%. Some companies--amid intense market competition and a lack of orders--are facing reduced production or shutdowns.

How can EV battery shortages be prevented?

This article focuses on three key measures for preventing or responding to EV battery shortages: industrialization and scale-up of gigafactories, strategies to find and retain talent, and establishment of a robust and efficient supply chain.

Can the EV battery supply chain meet increasing demand?

Concerns about the EV battery supply chain's ability to meet increasing demand. Although there is sufficient planned manufacturing capacity, the supply chain is currently vulnerable to shortages and disruption due to ge

Why Reduce Excess Inventory Costs. How do companies reduce inventory costs? And why should your company focus on it instead of increasing earnings or other ...

To reduce inventory, battery cell suppliers have decreased their capacity utilization rates, leading to an overall industry operating rate falling below 50%. Some ...

China's electric vehicle (EV) battery market is expected to see continuous destocking of inventory this year as demand for EVs cools and companies along the lithium-ion battery supply chain...

Our Battery Inventory Management program covers inventory management, verification of battery voltage, storage, and shipping to end-customer. In our closed-loop system, we offer ease and ...

3. Battery mileage. Judging from the current data released by major lithium battery companies, electric vehicles have caught up with or even surpassed fuel vehicles in ...

Optimizing factory layouts and battery-specific infrastructure can significantly reduce operational costs and the physical footprint. Valuable measures include the following. ...

Swedish battery manufacturer Northvolt, once the poster child of Europe's green industry and battery independence, has narrowly avoided bankruptcy prompted by a ...

As demand in the power and energy storage battery markets cooled, cell makers adjusted their capacity utilization rates downward to reduce inventories, causing the industry's overall start rate to drop to less than 50 ...

Many companies also reduce inventory by "buying less stuff", but this will actually lead to more inventory (see also post above). "The more inventory a company has, the ...

In addition, many companies are looking into no- or low-cobalt NMC variants (e.g., NMx, high lithium manganese [HLM], high-voltage mid-nickel), which would further reduce the cost advantage of LFP. Finally, import tariffs (such as those ...

As Europe strives to reduce its dependency on imported materials, establishing local supply chains and securing raw material supplies have become more challenging than ...
