

How do you recondition a lead acid battery?

**Steps to Recondition a Lead-Acid Battery**  
**Safety First:** Wear safety goggles and gloves to protect yourself from the corrosive acid.  
**Remove the Battery:** Take the battery out of the vehicle or equipment.  
**Open the Cells:** Remove the caps from the battery cells. Some batteries have screw-in caps, while others have rubber plugs.

Can lead acid batteries be reconditioned?

Lead acid batteries can sometimes sustain damage that cannot be repaired through reconditioning. A common issue is sulfation, where lead sulfate crystals accumulate on the battery plates. Severe sulfation may reduce the battery's capacity beyond recovery, making replacement necessary.

What causes a lead acid battery to die?

Lead acid batteries often die due to an accumulation of lead sulphate crystals on the plates inside the battery. Fortunately, you can recondition your battery at home using inexpensive ingredients. A battery is effectively a small chemical plant which stores energy in its plates.

What happens when a lead acid battery is charged?

When charging a lead acid battery, sulfuric acid reacts with lead in the positive plates to produce lead sulfate and hydrogen ions. Simultaneously, lead in the negative plates reacts with hydrogen ions to form lead sulfate and release electrons. This chemical reaction generates electrical energy used to power devices.

Why do I need a battery restoration?

This is better for the environment as it reduces wastage, whilst also reducing your costs. We have invested nearly £1m in our battery restoration techniques to restore batteries to nearly full capacity. Save money by restoring batteries rather than simply replacing them.

How do you remove acid from a battery?

**Open the Cells:** Remove the caps from the battery cells. Some batteries have screw-in caps, while others have rubber plugs.  
**Drain Some Acid:** Use a syringe or dropper to carefully remove some of the acid from each cell. Aim to reduce the acid level to about 50-60%.  
**Add Epsom Salts:** Add about 1 tablespoon of Epsom salts to each cell.
