

Do aftermarket batteries have a valid part number?

Aftermarket batteries may NOT have a valid Part Number, Vendor code or Serial number. Ross-Tech cannot offer assistance if the necessary information is missing. This procedure applies to battery replacement in vehicles using a separate battery management control module. Address 61: Battery Regul.

How do I fix a non Bem coded battery?

As per their own instructions for non BEM coded batteries I changed only the final digit on the battery serial code, and updated the manufacturer to VAO (Varta). Cleared the Battery management error code (on the same screen) and monitored it for 48 hours and all good holding 12.7v when off.

What is the correct coding type for AGM batteries?

The correct coding type for AGM batteries is "fleece" and not "binary AGM", as that is a different type of battery altogether. Pretty much the manufacturer coding does not matter. But as long as the serial number is changed by 1 digit and the battery has the correct AH rating plus it coding as fleece you will be fine.

What is 61-battery regulation & adaptation Channel 004?

In these cases, the new battery information is entered in 61-Battery Regulation then Adaptation Channel 004. This procedure applies to battery replacement in vehicles using a battery management control module that is a slave/subsystem of the CAN Gateway. Part No SW: 8T0 907 468 Q HW: 8T0 907 468 L

When should a battery pack be balanced?

Assuming the battery pack will be balanced the first time it is charged and in use. Also, assuming the cells are assembled in series. If the cells are very different in State of Charge (SoC) when assembled the Battery Management System (BMS) will have to gross balance the cells on the first charge.

Can a cell manufacturer assemble and charge without gross balancing?

1. Supplier Delivers Matched Cells If the cell manufacturer can deliver cells with a proven quality history of OCV within $\pm 0.02V$ then you will be able to assemble and charge these cells without gross balancing. What is measured at Cell manufacturing end of line should be remeasured at Goods receipt.

The original battery is a Banner AMG 68Ah CCA 680. I know how to code the battery if it was from the dealership with the BEM code sticker details, part number, vendor code and serial number. I do have VCDS. I have looked online for a picture of a dealership battery with the same ratings to copy the BEM code sticker, but I have had no luck.

Honestly, coding the car to match the battery and registering the now year-old battery might be worth it just to satisfy curiosity, also. Being that the battery is a higher-capacity battery (AGMs handle "deep-cycling" better

than flooded lead-acid) than the original isn't so bad.

Battery Sorting is a fun sorting game with fast-paced gameplay. Be quick and ultra-reflexive to sort the red and black batteries and arrange them without getting into contact. Sort as many batteries as you can achieve high ...

Step 1 - Find your battery. Open your bonnet and locate the battery. In many cases the battery may be in a plastic box or padded canvas cover. Note that in some rare cases the battery may be in the boot or under a seat inside the car.
