

Are self-propelled lawn mowers battery powered?

All models in the EGO range of self-propelled lawn mowers are powered by battery, which means you can reach right to the end of your lawn and not have to worry about the length of your power cord, or accidentally mowing through it. Each model is supplied with a battery and charger.

How much does a self-propelled cordless lawn mower cost?

The price you pay for your self-propelled cordless lawn mower will depend on the brand, the batteries supplied and what else the mower can do. For the most part, you will be able to pick up a decent self-propelled cordless mower for between £300 and £500.

What is the largest self-propelled lawn mower?

The largest self-propelled lawnmower in our range, the EGO Power+LM2135E-SP, is supplied with a 7.5Ah battery that will allow you to cut up to 1000sqm on a single charge; it packs a 70L collection bag and a multi-blade cutting system. Cuts like a petrol mower. Just cuts out the petrol.

What is battery capacity?

Battery capacity is the amount of energy a battery can store, typically measured in ampere-hours (Ah) or watt-hours (Wh). Ampere-hours indicate the total charge a battery can deliver at a specific current over time, while watt-hours provide insight into the energy stored, factoring in voltage.

How to maximize battery capacity & lifespan?

To maximize battery capacity and lifespan, you can focus on the following tips: - Avoid deep discharge: Keep the charge between 20-80% to reduce stress on the battery. Deep discharge can lead to sulfation in lead-acid batteries, which reduces efficiency and lifespan.

How long does a cordless lawn mower battery last?

The battery for your cordless lawn mower will typically last up to 500 charges. The time that this covers depends on how often you use the battery but as a rule of thumb, this would mean that the battery would last between three and five years. In terms of running time, cordless mowers differ greatly.

Equipped with 200 kWh or 400 kWh LFP battery capacity, a single 180 kW or 2 x 90 kW chargers, and multiple 3-phase sockets, it delivers high efficiency and large capacity, ...

Key Features of High Capacity Batteries: Energy Density: They possess higher energy density, allowing them to store more energy in a smaller volume. Longevity: These batteries can last between 2000 to 4000 cycles, ...
