The energy density of capacitors is much lower than batteries. So for the same size and weight you get a lot less distance with a capacitor bank than with a bank of lithium ion batteries. Supercapacitors may still be useful for cars though. They are able to provide much higher current than even the best lithium ion batteries.

With a Depth-of-Discharge (DOD) of 100% and round-trip efficiency of 99.1%, the Sirius batteries delivered, and rated capacity are almost the same, allowing for a significant reduction in the number of batteries required when compared to systems utilizing chemical batteries, thereby lowering capital investment.
