

# China builds solar thermal equipment for solar power plants

Why is China launching a solar thermal power demonstration project?

In order to boost the solar power industry to the next level as well as minimize the risks among, China's National Energy Administration has lately announced the National Solar Thermal Power Demonstration Project. This project has approved the first batch of solar thermal power demonstration plants.

What is China's new dual-tower solar power project?

China's foray into solar thermal power began in 2016, but this new project takes it a step further with its dual-tower design. "The mirrors in the overlapping area can be utilized by either tower," explains plant project manager Wen Jianghong. "This configuration is expected to enhance efficiency by 24 percent."

Where is China's first dual-tower solar thermal plant located?

China Three Gorges Corporation An aerial view of the world's first dual-tower solar thermal plant in northwest China's Gansu Province. /China Three Gorges Corporation A Chinese power company is pioneering world-first technology by combining two endothermic towers to achieve a significant efficiency boost.

Does China need thermal energy storage?

China required from the first demonstration phase that each CSP project must include thermal energy storage, marking the first recognition globally of the value of the low cost and longevity of thermal energy storage. As a power station storing solar energy thermally, CSP operates like a gas plant to supply grid services like rolling reserves.

How many solar thermal power demonstration plants are there?

This project has approved the first batch of solar thermal power demonstration plants. These plants total 20, recommended by relevant local development and reform commissions (or local energy boards) and then reviewed by the National Energy Administration, are expected to reach a total capacity of 1.35GWs.

How big is China's solar power plant?

The plant covers an area of 33,000 acres (200,000 Chinese mu) and is reported to have an output of 6.09 billion kWh annually. Data released by China's National Agency in January revealed that the country's solar electric power generation capacity grew by a staggering 55.2 percent in 2023.

By 2024 China is building 30 Concentrated Solar Power Projects as part of gigawatt-scale renewable energy complexes in each province, appropriately reflecting the urgency and scale needed for climate action

The 1-million-kilowatt integrated concentrated solar-thermal power (CSP) and photovoltaic (PV) energy demonstration project in Hami, in Northwest China's Xinjiang Uygur Autonomous Region, has ...

## China builds solar thermal equipment for solar power plants

DAHAN solar plant and the testing platform of China solar thermal power technology would be has been constructed on the lands of the Yanqing District, Beijing, (Longitude 115°44' to 116°34' Latitude 40°16' to 40°47'), 74 km north-west from the city of Beijing. It consists of 10,000m<sup>2</sup> collector field, 100m tower, 8MW thermal power ...

China has reportedly developed the world's first dual-tower solar thermal plant near Guazhou County in Gansu Province to enhance efficiency ...

China's foray into solar thermal power began in 2016, but this new project takes it a step further with its dual-tower design. "The mirrors in the overlapping area can be utilized by either tower," explains plant project ...

This project has approved the first batch of solar thermal power demonstration plants. These plants total 20, recommended by relevant local development and reform commissions (or local energy boards) and then reviewed by the ...

China's First "Hundred Megawatt Solar Thermal Power Plant Operation Result Release" Conference was jointly held by the People's Government of the City of Dunhuang, Beijing Shouhang Ihw Resources ...

The solar multiple is the ratio of the thermal power generated by the solar field at the design point to the thermal power required by the power block under nominal conditions. Recent studies investigated the optimum size of both TES and the solar multiple for different CSP plants, and it is the effect on the LCOE.

The plant is part of a clean energy complex consisting of solar, thermal, and wind power plants that will collaborate to produce over 1.8 billion kilowatt-hours of electricity annually and prevent ...

Chint Green Energy's New Energy Wenzhou Taihan 550MW fishery-solar complementary project. Image: Astronergy. Pioneering projects in China are demonstrating ...
