

China hands over battery technology to companies

Will Chinese companies be able to develop batteries in Europe?

New criteria requiring Chinese businesses to have factories in Europe and share technological knowhow will be introduced when Brussels invites bids for EUR1bn of grants to develop batteries in December, according to two senior EU officials. The pilot could be rolled out to other EU subsidy schemes, they said.

Are Chinese battery manufacturers suing us & China?

According to Hilary Preston, Vice Chair at Vinson & Elkins, Chinese companies' efforts to commercialize their products within the U.S. has been met with litigation in both the U.S. and China. The lawsuits Preston said, involve high profile Chinese battery manufacturers like COSMX, ATL, and CATL (which is particularly important for the EV market).

Will more litigation prevent Chinese batteries from coming to market?

But she also noted more litigation does not necessarily mean Chinese batteries will be prevented from coming to market. Instead, it's more likely companies will shift around build expenses like paying out IP royalties into their business plans.

Should Chinese companies invest in European EV battery supply chain?

According to the report, this is due to be rolled out ahead of a new EU grant scheme of more than EUR1 billion meant for companies to invest and develop a European EV battery supply chain. If Chinese companies want part of those grants, they may need to turn over IP and invest in European factory locations.

Why are Chinese battery companies suing EV manufacturers?

The lawsuits Preston said, involve high profile Chinese battery manufacturers like COSMX, ATL, and CATL (which is particularly important for the EV market). That means Chinese companies are to a degree competing among themselves to attain the best market position in the U.S. -- in part by defending their IP.

Will China be able to transfer technology to European companies?

Hand Over Your Technology The EU is expected to allow Chinese access to European subsidies in exchange for transferring technology and IP to European companies. This is expected to be confirmed before new EU grants for battery manufacturing become available in December.
