How does an electric vehicle charging pile work?

An electric vehicle charging pile provides two charging modes: regular charging and quick charging. Users can swipe a specific charging card on the human-computer interaction interface provided by the charging pile to carry out corresponding operations such as selecting the charging mode, charging time, and cost data printing, etc.

What is the installation distance of the charging pile?

The minimum installation distances for the charging pile are: no less than 700 mm from the back door to the wall, and no less than 500 mm from the side face to the wall. (5) The canopy is built together with the charging pile. (6) This installation method is just a sample for reference.

How do I set up the Charging Pile?

To set up the Charging Pile, follow these instructions: Enter the system menu page by clicking 'system' at the bottom left of the homepage. A username and password dialog will appear. Use the following credentials: Username: USER, Password: 4567. Click 'OK' to enter the system setting page.

Where should a charging pile be located?

1. Charging piles should not be located in places that are dusty or contain flammable, explosive, and corrosive objects. 2. The charging pile should be installed in a ventilated environment, and the ambient temperature should meet the requirements for normal charging of electric vehicles. 3.

How to install outdoor charging piles?

Necessary rain-proof and dust-proof measures should be taken for outdoor charging piles (such as membrane structure canopies). 1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room.

How to install charging equipment?

1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room. A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation.
