

Why do pilots need a control display unit?

Pilots rely on our clear and easy-to-navigate displays to safely get them and their passengers to millions of destinations a year. Our Control Display Units help pilots navigate flight trajectory while also monitoring traffic congestion.

What technology does a flight system offer?

Our flight systems deliver state-of-the-art technologies, including: Vehicle Management Computer: This new multi-core computer combines flight management, display processing, battery management integration, flight control interfaces, sensor data fusion, new human-machine interfaces and remote data concentration.

What is a control display unit?

Our Control Display Units help pilots navigate flight trajectory while also monitoring traffic congestion. Our advanced radar improves safety, utilizing the latest in touch-screen technology and clear visuals for easy and quick viewing during flight operations.

What are the new features of flight control system for eVTOL?

The new features of flight control system for eVTOL are described to start function capture and architecture design. Model-based system engineering method is applied to establish the functional architecture in a traceable way.

What is a flight control unit (FCU)?

The FCU is an equipment that contains controls and displays required for: Auto-Flight System, Primary Flight Display configuration including baro setting. Navigation Display (ND-CP) configuration including: Range and Type of display, Weather information display, Terrain information display, Traffic information display.

How does a primary flight control system work?

s data busses, referred to as L, C, and R. The connection from these electronic units to each of the data busses is via a stub cable and an ARINC 629 coupler. Each coupler may be removed and replaced without disturbance.
11.4.4 Interface to Other Airplane Systems
The Primary Flight Control System transmits and receives data from other

The emergence of eVTOL (electrical Vertical Takeoff and Landing) aircraft necessitates the development of safe and efficient systems to meet stringent certification and ...

Advanced flight control system, aviation battery and motor technologies are driving the rapid development of eVTOL to offer possibilities for Urban Air Mobility. The safety and airworthiness of eVTOL aircraft and systems are the critical issues to be considered in eVTOL design process.

A SkyView HDX System starts with the display, available in 10" and 7" sizes. ... and four different servo types to facilitate connecting with any form of light aircraft flight control systems. ... redundant ADAHRS, battery backup, and an IFR ...

Multi-Function Radar Display; FMZ-2000 Flight Management System (FMS) Version 6.1 Upgrade; Flight Controls and Autopilots; FMZ-2000 Flight Management System (FMS) ... Fly-By-Wire (FBW), is a fully electronic flight ...

Diehl Aerospace in cooperation with Thales provides Multifunction Displays for all Airbus ...

The Primary Flight Control System on the Boeing 777 is comprised of the outboard ailerons, flaperons, elevator, rudder, horizontal stabilizer, and the spoiler/speedbrakes. ... DC main airplane busses, the airplane hot battery buss, and dedicated 5 Ah FCDC batteries. During flight, the PSAs draw power from the PMGs. For on-ground engines-off ...
