# Does solar power have to be installed in residential buildings

Why do solar panels need building regulations?

Compliance with building regulations helps protect the integrity of the building, ensures electrical safety, and minimizes the risk of accidents or damage caused by improper installation. In the UK, the installation of solar panels is subject to both planning permission and building regulations approval.

#### Do I need planning permission to install solar panels?

However,make sure you follow all building regulations and apply for planning permission if necessary, as your neighbour could report your installation to the local authority if you don't - which could result in your panels having to come down.

#### Are solar panels allowed on a property?

Certain conditions must be met for permitted development rights for solar panels which include: Panels must not protrude more than 200mm from the roof. This helps to protect the appearance of the building. The solar panels must not affect the structure of the roof or the appearance of the property.

#### Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system - so there's absolutely no benefitto installing solar panels that don't meet building regulations. It's crucial that your solar installation follows all building regulations.

What are the regulations for installing solar panels on your property?

Arguably, the most important regulations for those looking to install solar panels on their property are those that consider the placement or positioning of the solar panels. These vary depending on whether your property is for commercial or domestic purposes.

### Do solar panels need Building Regulations approval?

Building regulations approval is mandatory for solar panel installations in the UK. The approval process ensures compliance with safety, structural, and electrical standards. It verifies that the installation is carried out by competent installers and that all relevant regulations are adhered to.

In March 2024, the European Parliament passed a law mandating solar panels on all new residential buildings by 2030, aiming to boost energy efficiency and cut carbon emissions in the EU. The rollout will begin with public and commercial buildings until 2026 and extend to residential structures by 2030 [1].

Do you have enough space on your roof to be able to install solar panels? An average installation will need around 20m2 of roof surface area. If you don't have a roof that's large or strong enough to accommodate the number of solar panels you need, solar power might not ...
