

Are EPs batteries the same as battery chargers?

For products without built-in batteries, they serve as the main continuous source of power - for example standalone loudspeakers or computer network equipment such as modems and routers. EPSs are not the same as battery chargers, which charge stand-alone batteries or battery packs and which are exempted from this Ecodesign regulation.

What are the new ecodesign requirements for external power supplies?

The draft Commission Regulation proposes new ecodesign requirements for External Power Supplies (EPS), Battery Chargers for portable batteries, Wireless Chargers, Wireless Charging Pads, and USB Type-C cables.

1. Extending the scope - Wireless Chargers and Battery Chargers for portable batteries, as per Regulation (EU) 2023/1542. 2.

When does EPs apply?

It shall apply from 3 years after its entry into force. The draft Commission Regulation proposes new ecodesign requirements for External Power Supplies (EPS), Battery Chargers for portable batteries, Wireless Chargers, Wireless Charging Pads, and USB Type-C cables. 1.

What is a battery regulation?

1. This Regulation lays down requirements on sustainability, safety, labelling, marking and information to allow the placing on the market or putting into service of batteries within the Union. It also lays down minimum requirements for extended producer responsibility, the collection and treatment of waste batteries and for reporting. 2.

Should EPs be a USB Type-C charger?

Introducing a general requirement for EPS to be USB Type-C chargers to power a range of products not covered by the Radio Equipment Directive in order to maximize interoperability. 8. Excluding certain EPS from interoperability requirements.

When will harmonised standards be introduced for rechargeable batteries?

The report asks the Commission to look into the introduction of harmonised standards for common chargers applicable no later than 1 January 2026 for rechargeable batteries designed for electric vehicles, those made for light means of transport, and those incorporated into specific categories of electrical and electronic equipment, respectively.

4.1 To be considered a safe product under GPSR, a lithium-ion battery intended for use with e-bikes or e-bike conversion kits must include safety mechanism (s) ...

The draft Commission Regulation contains ecodesign requirements for the placing on the market or putting into service of external power supplies (EPS), battery chargers for portable batteries ...

Spacecraft electrical power subsystem (EPS) requirements such as bus voltage, charge management, fault tolerance, operating temperature, and mission duty power loading have a significant impact on battery safety and reliability.

The 2016 Regulations provide powers to the Secretary of State or a person appointed to act on their behalf to enforce the Regulations and RAMS (Regulation EC 765/2008, as amended by the Product ...

It's absolutely fine for the appropriate switching devices (island mode isolator to disconnect the distributor's live conductors, all lines and Neutral and the N-E bond relay to form TN-S when the grid is fully disconnected) to be part of the inverter, battery management system, etc., provided they meet these requirements.

A robust battery management system integrates a Complex Device Driver (CDD) with strict functional safety requirements and advanced control algorithms to ensure safe and efficient battery operation. ... Compliance with these regulations ensures that the battery packs are safe under a wide range of conditions and scenarios. Apart from industry ...

The EPS board is equipped with functionalities, including optimizing solar array input through peak power tracking, adept management of onboard and external battery charging, precise charge level control, voltage regulation, and ...

Pack. EU Battery Regulation; Application. Grid; Electric Vehicle.
