

What is a home backup battery?

A home backup battery provides a safety net when you need to protect your family against a power loss. It delivers clean power, unlike a home standby generator that relies on fossil fuels. With battery backup solutions, you get energy security and peace of mind.

Do you need a backup battery for your home?

Extreme weather events and aging grid infrastructure mean you need to be ready for the power to go out in your home. A backup battery solution for your home is one of the most efficient ways to keep the lights on when a blackout comes. A home backup battery provides a safety net when you need to protect your family against a power loss.

Is a whole home battery backup system worth it?

You'll need about three times as much power for a whole home backup system, which is about three times the price of a partial home setup. Partial home battery backup systems generally make more sense for the average American home, but a whole-home setup may be worth it if you live in an area with frequent blackouts.

How does a backup battery system work?

Instead, backup battery systems have a relay to physically disconnect the electricity supply in a building from the grid (called islanding). It's essentially a big switch, which detects that the drop in voltage on the grid in the event of a power cut, and disconnects the home from the grid.

How do you charge a backup battery system?

Backup battery systems are generally charged by utility grid electricity or solar power. If you live in an area where you get great levels of sunshine, then consider using solar power to charge your batteries up during the day. Also: [The 5 best solar chargers](#)
