

How do I install solar thermal systems?

In order to install solar thermal systems for commercial or domestic purposes, you'll need to be a qualified plumbing & heating engineer with an unvented ticket. It is always highly advisable to attend any manufacturer training before attempting installations.

How long does it take to install a solar thermal system?

The fluid is then pressurised to approximately 2 bar or as per the manufacturer's exact specifications. At the end of the installation process your installer will also register your solar thermal system with the Microgeneration Certification Scheme. For small systems, the installation will only take 1-2 days.

Do I need a surveyor to install a solar thermal system?

It is also necessary to have an MCS-accredited surveyor (and not a salesman) inspect your property, who will do the following: A typical solar thermal installation will involve the following steps: A solar thermal system is predominantly a plumbing exercise with a small amount of electrical wiring, roof installation and system assembly.

How do I become a solar thermal installer?

Installers may need to partner with a roofing firm to acquire additional equipment to safely carry out the roof elements of the installation. In order to gain a better understanding of the system or to be MCS accredited for solar thermal installation, installers would need to sit a NOS mapped course (which typically takes 3 days to complete).

How is a solar thermal system designed?

Factors such as solar exposure, shading, roof orientation, and available space are considered. The assessment also includes an analysis of the current energy consumption patterns to determine the appropriate system size. Once the site assessment is complete, a tailored solar thermal system design is created.

Are solar thermal panels compatible with hot water systems?

Solar thermal panels are compatible with most existing hot water systems, however the customer will require a solar thermal cylinder to store the heated water generated by solar thermal if they don't have one already. Solar thermal cylinders typically have a coil at the bottom for the solar and a second coil above for the heating appliance.
