HTP's solar collectors can absorb nearly 80% of the sun's energy in comparison to photovoltaic (solar electric) technology that is approaching only 20%. That is why there are so many of them in comparison. Our thermal solar collectors produce approximately 1,000 BTUs per sq. ft. per day.

Vitosol flat-plate collectors. At the heart of the flat-plate collectors in the Vitosol product range is the meander-shaped absorber, which is located beneath a stable and highly transparent cover panel made of special glass. The high quality materials guarantee a permanently sealed and highly stable system. With the Vitosol 200-FM and Vitosol 100-FM, up to twelve solar ...

Shadow effect on incident solar energy was examined by Farhadi and Taki and resulted in showing that tilt angle, latitude, collector length, collector height and width are the major factors which affect the incident solar energy. They concluded that reducing shadow effect increases the width of the flat plate SWH; provide length
