

Can you fix a roof leak under solar panels?

When faced with a roof leak under your solar panels, it's important to take immediate action to prevent further damage to your roof and home. Fixing a roof leak under solar panels requires careful attention to safety precautions and following the proper steps to resolve the issue.

Why does my roof leak after installing solar panels?

There are various reasons your roof could leak after installing solar panels. They mostly have to do with poor installation where mounting holes are not sealed properly, the top is incompatible with solar panels, or the roof is old and not designed for solar panels.

How do I seal a leak under my solar panels?

Applying sealant is a temporary solution that can help to seal small gaps or cracks in the roof under your solar panels. This can be particularly useful when you have identified the source of the leak and it is accessible. Here are the steps to follow when applying sealant:

What should I do if my roof leaks?

While you can check the roof for debris or damage, your best bet is to call your installer immediately. There could be any number of causes for a leak, including damage caused by walking on the roof, dragging solar panels, or having a tile break in the underlayment.

What causes solar panels to leak?

Debris such as leaves and branches can accumulate on your solar panels and cause water to pool. If the water cannot drain properly, it can seep under the panels and cause leaks. Therefore, it is important to keep the area around your panels clean and free of debris.

How do you reinstall solar panels after roof repairs?

Reinstall the solar panels: After the roof repairs have been completed, carefully reinstall the solar panels following the manufacturer's instructions or seek professional assistance. Ensure that all electrical connections are properly reconnected and tested before turning the solar panel system back on.
