

# How to install battery modules on the energy storage motherboard

How do I stack a battery module?

Stack the entire system. The modules are heavy and require at least two people to lift. Stack the battery modules one by one. The guide pins will make sure that the connectors mate properly. 2. Turn on the power switch on each module, beginning with the one on the bottom. (5) Turn on the power switch on the controller module.

Where is a battery module interface located?

This panel is under the cover on the right side of each battery module. The "Addr" switches define the address of this module. Each module in a stack must have its own address. The module directly below the controller should be set to 1, the one below it set to 2, and so on down the stack. Figure 2.4. Battery module interface definition NO.

What is a stacked battery management system (BMS)?

The Stack'd Series has a built-in battery management system (BMS). The BMS manages and monitors information including voltage, current and temperature from the cells inside the battery. The BMS will balance the battery cells to maximize the energy that can be stored and recovered.

How to check if a battery module is safe?

2. Turn on the power switch on each module, beginning with the one on the bottom. (5) Turn on the power switch on the controller module. Observe that the display screen has no alarm protection status, the number of battery modules has no loss and flicker, and the system parameters and status display are normal.

Can the stack'd controller module work with a smart inverter?

The Stack'd Controller Module can exchange information with a smart inverter regarding desired voltages, currents, and other information. HomeGrid has programmed the Stack'd system to work with smart inverters from several companies.

What is a battery management system (BMS)?

The Battery management system (BMS) has many protection functions including over-discharge, over-charge, over-current, and high/low temperature. The system will automatically manage charging and discharging and balance the current and voltage of each cell.
