

# How to install the energy storage charging pile mounting bracket

How to install a charging pile?

Lay the power cord according to the wire diameter requirements, align the pile body with the holes, place it on the cement base, and tighten it with M12X70 bolts. 4. Connect the input cable, and check whether the charging pile has an overcurrent, short circuit, lightning strike, or other protection devices.

How to install charging equipment?

1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room. A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation.

Where should the Encharge battery(ies) be placed?

During use, storage, transport, or installation, always keep the Encharge Battery(ies) in an upright position. **WARNING:** You must install the Encharge Battery(ies) only on a suitable wall using an Enphase wall-mount bracket.

How far should a charging pile be from the charging pile?

A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation. At the same time, try to install the device under a canopy to avoid direct sunlight and rainwater erosion from affecting the life and performance of the device. 2.

Where should a charging pile be located?

1. Charging piles should not be located in places that are dusty or contain flammable, explosive, and corrosive objects. 2. The charging pile should be installed in a ventilated environment, and the ambient temperature should meet the requirements for normal charging of electric vehicles. 3.

Can Encharge storage systems provide backup power?

Encharge storage systems are capable of providing backup power when Enphase Enpower™ is installed at the site. Whole home backup with Enpower as service entrance and PV combiner connected to Enpower.
