

# How to measure voltage and current of photovoltaic solar panels

How do I measure PV current?

Note: You can more easily measure PV current by using a clamp meter, which I discuss below in method #2. That's right -- you can use a multimeter to measure how much current your solar panel is outputting. However, to do so your solar panel needs to be connected to your solar system.

How do you test a solar panel with a multimeter?

To test the current, simply connect the multimeter to the panel's output. Set it to read DC current. Now, measure the current of the panel by connecting your multimeter. To test voltage, set your multimeter to read AC voltage. Connect the multimeter to one of your panels' output terminals and then measure the voltage.

How to test a solar panel under standard conditions?

You can use the following method if you want to test your solar panel under standard conditions. Testing solar panels is easy with a multimeter! To test the current, simply connect the multimeter to the panel's output. Set it to read DC current. Now, measure the current of the panel by connecting your multimeter.

How do you measure voltage on a solar panel?

Using a voltage meter, locate the open-circuit voltage (Voc) on the specifications label on the back of your solar panel. Write it down for later use. To measure the voltage of a DC circuit, you should prepare your multimeter by plugging the black probe into the COM terminal and the red probe into the voltage terminal.

How do you test a solar panel?

To test voltage, set your multimeter to read AC voltage. Connect the multimeter to one of your panels' output terminals and then measure the voltage. To test resistance, place one probe of your meter on a wire while placing another probe on an insulated part of the solar cell or module. The meter will give you a reading in ohms (Ω).

How do I test my solar panel & regulator?

You can download and print the pdf version of [How to Test Your Solar Panel and Regulator](#). Find the voltage (V) and current (A) ratings of your panel (you can usually find these written on the back of the panel). Check that sunlight conditions are suitable for producing readings on your system.
