How do I plan a battery energy storage system?

Conduct an analysis of the customer's current energy costs based on customer electricity bills. Depending on the purpose of the battery energy storage system, include a description of how the proposed battery energy storage system is expected to impact/change the customer energy usage and electricity costs.

What is a battery energy storage system?

Battery energy storage system (BESS): Consists of Power Conversion Equipment (PCE), battery system(s) and isolation and protection devices. Battery system: System comprising one or more cells, modules or batteries. Pre-assembled battery system: System comprising one or more cells, modules or battery systems, and/or auxiliary equipment.

Can a battery energy storage system be installed in Australia?

Any upgrades to existing site electrical infrastructure required to install proposed battery energy storage system. All components of the system should be suitable for installation under Australian legislation and Standards.

How do I certify a battery energy storage system?

Provide a hardcopy and electronic copy of the battery energy storage system SDS. Provide a copy of NETCC consumer information guide. Provide customer with the name and licence/accreditation number of the tradesperson who designed/signed off on the installation.

What are the customer requirements for a battery energy storage system?

Any customer obligations required for the battery energy storage system to be installed/operated such as maintaining an internet connection for remote monitoring of system performance or ensuring unobstructed access to the battery energy storage system for emergency situations. A copy of the product brochure/data sheet.

What equipment do I need to install a battery energy storage system?

Any bollards required to be installed in front of battery energy storage system. Safety exclusion zone around battery energy storage system if required. Location of main switchboard. Any other existing NET on site.

Battery storage is also becoming increasingly popular with our larger customers, as a way to add value to their own electricity generation or sell flexibility services on the market. It has a key role to play in the future of the energy system. **USEFUL RESOURCES** . There is a wealth of information available about electrical energy storage.

For example, if you have a 5kW inverter and you are producing 8kW of power, 5kW of solar power can go to
