Fig. 13 compares the evolution of the energy storage rate during the first charging phase. The energy storage rate  $q_{sto}$  per unit pile length is calculated using the equation below:  $(3) q_{sto} = m \cdot c_w \cdot T_{in\ pile} - T_{out\ pile} / L$  where  $m$  is the mass flowrate of the circulating water;  $c_w$  is the specific heat capacity of water;  $L$  is the ...

Energy storage cabinet should be used for energy storage charging pile. Such a huge charging pile gap, if built into a light storage charging station, will greatly improve the "electric vehicle long-distance travel", inter-city traffic "mileage anxiety" problem, while saving the operating costs of charging pile enterprises, new energy The consumption has provided more favorable ...
