

What welding technology is used in lithium ion battery system?

Since the lithium-ion battery system is composed of many unit cells, modules, etc., it involves a lot of battery welding technology. Common battery welding technologies are: ultrasonic welding, resistance spot welding, laser welding, pulse TIG welding.

What are the different battery welding technologies?

Common battery welding technologies are: ultrasonic welding, resistance spot welding, laser welding, pulse TIG welding. This post combines the application results of the above battery welding technologies in lithium-ion battery systems, and explores the influencing factors. Ultrasonic welding is a solid state battery welding process.

How is a 26650 lithium-ion battery welded?

As external conductor a CuZn37 sheet of 0.2 mm thickness was welded at the negative pole of the cell. The negative tab of the battery cells is made of nickel-plated steel. Welding results for the 26650 lithium-ion cells and the chosen geometries of the weld areas are shown in Fig. 16.

Can laser wobble welding be used for lithium-ion battery packs?

Laser wobble welding of thin Steel tabs to thick Aluminium busbar for Lithium-ion battery packs. Weld geometry, microstructure, mechanical strength, and electrical contact resistance investigated. Development of optimum laser-wobble parameters to achieve high mechanical and electrical properties.

Which welding techniques can be used for connecting battery cells?

Brass (CuZn37) test samples are used for the quantitative comparison of the welding techniques, as this metal can be processed by all three welding techniques. At the end of the presented work, the suitability of resistance spot, ultrasonic and laser beam welding for connecting battery cells is evaluated.

How to weld a sheet metal connector with a battery cell?

Electrical connectors are required as electrical bridges between battery cells. For most 18650 Li-ion battery cells, either spot or laser welding technique can be used to weld a sheet metal connector with a battery cell. Infrastructure cost is lower. However, the quality of the spot welding technique is lower than which of the

Compared to Resistance Spot Welding (RSW) and Laser Beam Welding (LBW), Ultrasonic Metal Welding (UMW) is a more ideal joining process for Li-ion battery applications.
