To demonstrate the applicability of the HETM model to lithium-ion batteries with various materials, a simulation was added for a battery with NMC622 as the cathode material. The parameters of this battery were derived from the paper by An FQ et al. [18]. The battery's cathode is made of NMC622, the anode is graphite, the voltage range is 2.5V ...

A novel remaining useful life prediction framework for lithium-ion battery using grey model and particle filtering. International Journal of Energy Research, 44 (2020), pp. 7435-7449. Crossref View in Scopus Google Scholar. Chen et ...

Lithium-ion batteries (LIBs), utilized extensively in electric vehicles and energy storage systems, are favored for their superior energy density, absence of memory effect, and low self-discharge rate [1]. The aging of LIBs, resulting from irreversible electrochemical reactions and physical structure changes during charging and discharging cycles, leads to reduced battery ...
