

How do radio controlled watches work?

Radio-controlled watches have an antenna to pick up the radio signals that emit the precise time from these clocks and use a circuit to decode the transmission and adjust the display accordingly. This ensures that the watch is always displaying the time as precisely as possible. In the UK, the time signals are broadcasted by the MSF.

What is a radio controlled wristwatch?

Radio controlled wristwatches are a relatively new invention within the horological timeline. The technology behind these highly precise watches has existed since the 1950s, but it was only in 1991 that Junghans managed to miniaturise this technology into the form of the radio controlled Mega 1 wristwatch.
