

Why is regular maintenance important for lead-acid batteries?

Regular maintenance not only extends the life of the battery but also prevents costly replacements. Here are some reasons why regular maintenance is crucial for lead-acid batteries: Sulfation is a common problem that occurs in lead-acid batteries when the lead sulfate crystals form on the battery's plates.

How do you maintain a lead-acid battery?

Lead-acid batteries discharge over time even when not in use, and prolonged discharge can permanently damage them. By following these maintenance practices, you can significantly extend the life of your lead-acid batteries and ensure optimal performance in all your applications. Store batteries in a cool, dry place.

How long do lead-acid batteries last?

Lead-acid batteries typically last between 3 to 5 years, but with regular testing and maintenance, you can maximize their efficiency and reliability. This guide covers essential practices for maintaining and restoring your lead-acid battery. What are lead-acid batteries and how do they work?

How do you clean a lead-acid battery?

Check Electrolyte Levels: Ensure levels are above the plates; add distilled water if necessary. Clean Terminals: Remove corrosion with a mixture of baking soda and water. Inspect Connections: Ensure all connections are tight and free from corrosion. Chart: Maintenance Tasks for Lead-Acid Batteries How can I restore a lead-acid battery?

How often should a lead acid battery be recharged?

Sealed lead acid batteries need to be kept above 70% State of Charge (SoC) during storage. If you're storing your batteries at the ideal temperature and humidity levels, then a general rule of thumb would be to recharge the batteries every six months. However, if you're unsure, you can check the voltage to determine if a recharge is necessary.

How do you test a lead-acid battery?

Hydrometer Test: For flooded batteries, a hydrometer can measure specific gravity, indicating charge levels. Load Test: Apply a load to see how well the battery holds voltage under stress.
