

Should sodium sulfur batteries be used at a high temperature?

Sodium-sulfur batteries operating at a high temperature between 300 and 350°C have been used commercially, but the safety issue hinders their wider adoption. Here the authors report a "cocktail optimized" electrolyte system that enables higher electrochemical performance and room-temperature operation.

What is a sodium sulfur battery?

The as-developed sodium-sulfur batteries deliver high capacity and long cycling stability. To date, batteries based on alkali metal-ion intercalating cathode and anode materials, such as lithium-ion batteries, have been widely used in modern society from portable electronics to electric vehicles 1.

Does a room-temperature sodium-sulfur battery have a high electrochemical performance?

Herein, we report a room-temperature sodium-sulfur battery with high electrochemical performance and enhanced safety by employing a "cocktail optimized" electrolyte system, containing propylene carbonate and fluoroethylene carbonate as co-solvents, highly concentrated sodium salt, and indium triiodide as an additive.

Why are sodium-sulfur batteries used in stationary energy storage systems?

Introduction Sodium-sulfur (Na-S) batteries with sodium metal anode and elemental sulfur cathode separated by a solid-state electrolyte (e.g., beta-alumina electrolyte) membrane have been utilized practically in stationary energy storage systems because of the natural abundance and low-cost of sodium and sulfur, and long-cycling stability,.

Can sulfide-based solid-state electrolytes prevent sodium polysulphide dissolution?

Low-temperature Na-S batteries using sulfide-based solid-state electrolytes (SEs) could prevent sodium polysulfide dissolution and improve safety features. Major issues lie in sodium dendrite formation, unstable interfaces between sodium metal anode and SEs, and low sulfur utilization in the cathode ,..

The high theoretical capacity (1672 mA h/g) and abundant resources of sulfur render it an attractive electrode material for the next generation of battery systems [].
