How to install a solar panel inverter?

Connect the solar panel array's positive and negative terminals to the corresponding inputs on the inverter. Double-check the polarity and secure the connections to prevent energy loss or damage. Use cable ties and protective coverings to organise and safeguard the wiring.

Which direction should solar panels be installed?

“Solar PV (photovoltaic) panels generate electricity from sunlight and will normally be installed on the roof of the building facing in the most south direction. The panels should also face as much south as possible. If you faced east, or west, then expect a yield of around 20% less generation annually” explains David Hilton.
