

What is sun photography?

Photography is all about light, and that light is often sunlight. Even at night, when you photograph the Moon and the planets, you are working with sunlight. But have you ever tried to take pictures of the Sun itself? This article will introduce you to the many wonders of sun photography in an easy way and on a budget.

Is solar photography a good idea?

Solar photography is a very interesting, easy and affordable experience. A cheap white light filter on a superzoom bridge camera is all you need to peak into the sun's secrets. The greatest thing about solar photography is that the Sun is up there during the daytime hours.

Is solar photography dangerous?

Not to scare you, but solar photography is not without risks. It is important to use your good judgment and use caution when observing the Sun. Dangers come from having an optical system concentrating sunlight in one point. Without a proper filter, this can cause serious damages.

Can solar photography damage your eyesight?

But unlike snapping a landscape at sunset, solar photography demands meticulous attention to camera settings. Without proper safety precautions, you risk frying your camera sensor; or worse, damaging your eyesight. Before continuing, make sure you read the following guides

Can a bridge camera be used to photograph the Sun?

Image Credit: University of Alabama. Sun photography is not demanding when it comes to the camera. As long as you can secure a solar filter in front of your lens, you are good to go. A bridge camera is a great camera to start photographing the Sun.

How do you use a solar camera?

Use live view on the camera and turn on the histogram. This will allow you to see the light levels across the red, green, and blue channels. Start with a fast shutter speed, like 1/30th of a second. Because of your solar filter, less light is hitting your sensor.
