

Can solar panels be installed on a listed building?

With the installation of solar panels on a listed building, pre-application advice should be sought in the earliest stages of the proposal. In some cases, they will also need planning permission. The listed status of the building means additional care and consideration is required in the placement of the panels.

Can solar panels be built without permission?

This is because they generally fall under permitted development rights, which allow homeowners to make reasonably sized changes without getting permission. The exceptions to this rule are typically flats, listed buildings, homes in conservation areas, and ground-mounted installations. What are the building regulations for solar panels?

Do solar panels need planning permission?

For more information related to building regulations for solar panels, read this page over at the Planning Portal. As a rule of thumb, small residential installations will not require planning permission; they'll be covered by Permitted Development Rights.

Can solar panels be installed without a planning system?

Changes to permitted development rights rules will mean more homeowners and businesses will be able to install solar panels on their roofs without going through the planning system. Currently those who have to go through the planning system are having to wait over eight weeks and face extra costs.

Can I install solar panels on a listed church?

You can install solar panels on a listed church, but the process involves specific permissions from the church's relevant denominational authority rather than listed building consent (and you'll still need to apply for planning permission).
