If you can't see exactly what you need please contact us - we can customise any kit to suit your requirements.

Which solar panels should I buy?

For small-scale systems, 12V or 24V is what you want, especially to start with. You can also find small solar panels with voltages below 12V. People often ask which solar panels to buy, but there is little advice to give. You have a choice between mono- and polycrystalline solar panels.

What voltage do solar panels come in?

Solar panels come in different voltages, usually 12V or 24V, sometimes 36V, 48V, or higher for grid-tied systems. For small-scale systems, 12V or 24V is what you want, especially to start with. You can also find small solar panels with voltages below 12V. People often ask which solar panels to buy, but there is little advice to give.

Can a solar panel power a low-voltage device?

Directly coupling a low-voltage DC device to the low-voltage DC power produced by a solar panel avoids these energy losses and results in a more energy-efficient system. Practically, you can power the same device with a smaller solar panel. However, this implies that you use low-voltage appliances.

What is a solar PV system?

It deals with solar energy systems that charge batteries and simpler configurations that provide direct solar power. Conventional solar PV installations are installed on a rooftop or in a field.
