

Who makes a capacitor?

We source from globally renowned manufacturers AVX, Murata, KEMET, Panasonic, TDK and many more, so that you can rely on performance. A capacitor is a device used to store energy as an electric charge, similar to a battery but they are able to release the charge much faster.

What are the different types of capacitors?

Our range includes over 60,000 different capacitors including aluminium, tantalum, polymer, polyester film and ceramic capacitors. We source from globally renowned manufacturers AVX, Murata, KEMET, Panasonic, TDK and many more, so that you can rely on performance.

What type of capacitor is best for IC supply bypassing?

This is a very common 0.01µF / 10nF capacitor with a ceramic cap and 50V rated voltage, ideal for IC supply bypassing, coupling and decoupling applications. 2200mF 35V EXR Electrolytic Capacitor for smoothing out, filtering and performance tuning low frequency circuits and signals up to around 1KHz or less.

What is a 22 pF capacitor used for?

This is a very common 22pF capacitor with a ceramic cap and 100V rated voltage, ideal for IC supply bypassing, coupling and decoupling applications. 1500mF 16V FR Electrolytic Capacitor for smoothing out, filtering and performance tuning low frequency circuits and signals, as well as having excellent endurance at 105°C.

What is a 16V Fr electrolytic capacitor?

1500mF 16V FR Electrolytic Capacitor for smoothing out, filtering and performance tuning low frequency circuits and signals, as well as having excellent endurance at 105°C. These 0.1F 5.5V Electrolytic Super Capacitors are circuit guardians that store electric charge, smooth out low frequency circuits and signals.

What is the best ESR capacitor for a switch mode PSU?

1200mF 16V Super Low ESR Electrolytic Capacitors by Panasonic, made for high ripple circuits and ideal for switch mode PSU Builds and Repairs. 10mF 25V Electrolytic Capacitor for smoothing out, filtering and performance tuning low frequency circuits and signals of up to about 1KHz or less.
