

The battery pack loses one bar after each use

Does a Nissan Leaf have a battery health bar?

To my horror the battery health was showing it first sign of battery degradation. For those who might not know, these early Nissan Leafs have 12 bar status on the dashboard. Each loss of these Illuminated bars can be up to 8% battery capacity loss. From my research it's very odd to see a Leaf under 40K loss it's first state of health bar.

How long does a Nissan battery last if dipped?

"The battery shows full strength, 12 bars" In your ownership, it's dipped to 11 bars - $11/12 = 91.7\%$ - after 3yrs from new. The Nissan warranty replaces it if it drops to 8 bars - $8/12 = 66.7\%$ - after 8yrs. Assuming that's a linear curve, you will not reach 66.7% by 8yrs.

Does a Nissan Leaf lose a state of health bar?

For those who might not know, these early Nissan Leafs have 12 bar status on the dashboard. Each loss of these Illuminated bars can be up to 8% battery capacity loss. From my research it's very odd to see a Leaf under 40K loss it's first state of health bar. This was partially not good considering I had the car for 6 weeks.

How long does a LiIon battery last?

And, AUI, there's some evidence that initial degradation can be steeper than later, so it's more likely to be around 85% after 8yrs. Everybody who's ever owned a laptop or mobile knows that LiIon batteries lose capacity over time. We just don't normally keep the same laptop or phone for 8yrs.

How many miles would a 30 kWh battery lose in a summer?

If you assume 4 miles/kWh in the summer, then if you had 30 kWh then you would get 120 miles from 100%. You've indicated 8% loss so your battery is now 27.6 kWh. At the same assumed 4 mi/kWh in the summer you would get 110 miles. So you've lost 10 miles of range. Is that really 'realising your worst nightmare'?

How many bars does a car have?

The car may have 11 bars, but if it has the old firmware this can be updated and will most likely bring it back to 12 bars. Ask the dealer to check which firmware is installed as per @Aragorn's post above. I rang my local dealer about this, they said there were no outstanding updates on my reg number.

Have taken my first couple rides on ebikeling kit, and noticed that the battery capacity will drop to ~25%, with about moderate throttle (only going 10mph). Then when I get ...

????????????????, ?????????????????????, ?????????, ?????????????????????X????X-ray ...

On the ID.3 there's a gauge on the display with two bars, a blue one filling when you use power (accelerate)

The battery pack loses one bar after each use

and a green one filling when you recuperate from breaking. ... Physically what's happening is the battery pack voltage drops as ...

One question: Do you see the three bars while you are driving, or do you see that you only have seven bars left after you turn the car off? That's an important difference, since you often lose a bar when you switch off the vehicle. If it is the latter, then you have only lost the tenth (partial) bar and the ninth bar.

It's more about how the previous owner(s) have looked after the battery pack rather than the distance it has covered. ... It has lost 2 bars, the second one at around the 4.5 year point. So down to 10. Now/Summer the range at 100% shows ~100 miles, the same as the original Leaf 24 we had..

Yes, mine drains if not in use for a long time, but only up to 60% but that's a future I would expect from a smart battery (DJI batteries do the same). And after changing it at the Apple Store the charge holds up after charging.

This is when a battery gradually loses its charge over time, even if not connected to a device. ... How quickly that rate of self-discharge occurs and the extent of future use of your battery pack will drastically differ on a ton of different ...

????? NASA??? ?????: Prognostics Center of Excellence - Data Repository (nasa.gov) Battery Data Set
????:34?18650???????, ??? ?2Ah; ?? ...

After two weeks without use, it could drop to around 12.4 volts, and after four weeks, it may reach about 12.0 volts, which is often considered around the threshold for a healthy battery. Different battery types exhibit different idle characteristics.

A recent video from China shows a Geely Cao Cao 60 SUV that lost its battery pack while driving, a serious situation caused by its swappable battery pack. ... storing ...

Losing one bar indicates a battery capacity reduction of around 10%. If three or more bars are lost, it suggests significant degradation, potentially warranting replacement.
