## The types of energy storage charging piles include

What are the different types of charging piles?

Charging piles are mainly divided into AC charging piles and DC charging piles. AC charging piles have a smaller body, are flexible for installation, and typically take 6-8 hours to fully charge. They are suitable for small electric vehicles and are commonly used in public parking lots, large shopping centers, and community garages.

What is a DC charging pile?

A DC charging pile is a type of charging infrastructure suitable for fast DC charging of electric buses, minibuses, hybrid buses, electric cars, and taxis. DC charging piles generally have high current, larger charging capacity, larger bodies, and larger occupied areas in a short period of time.

What is a public charging pile?

Public charging piles are purchased by public service organizations such as governmentfor use by any electric vehicle owner, such as public parking lots.

What is the protection level of indoor and outdoor charging piles?

Indoor charging piles should have a protection level of at least IP32 or above, while outdoor charging piles need to have a protection level of at least IP54to ensure the safety of human bodies and charging equipment in harsh environments with wind, rain, and the need for better insulation and lightning protection.

Do charging piles need to lean against a wall?

Vertical charging piles do not need to lean against a walland are suitable for outdoor or residential parking spaces. In contrast, wall-mounted charging piles must be fixed by the wall and are suitable for indoor and underground parking spaces.

What are the different types of energy storage?

Note that other categorizations of energy storage types have also been used such as electrical energy storage vs thermal energy storage, and chemical vs mechanical energy storage types, including pumped hydro, flywheel and compressed air energy storage.
