

Is titanium dioxide an electron transport layer in perovskite solar cells?

In this review, we present a comprehensive summary of the recent progress in the synthesis and applications of titanium dioxides (TiO_2) as an electron transport layer (ETL) in perovskite solar cells. The review initially introduces the basics of perovskite solar cells, including their working principles and applied configurations as well.

Can titanium be used as a cathode interlayer in planar heterojunction perovskite solar cells?

In this work, the authors innovatively use a ultra-thin layer of titanium (Ti) as a cathode interlayer between metal electrode and perovskite film, without using any organic or inorganic electron transport layers, in planar heterojunction perovskite solar cells.

Which electron transport layer is used in perovskite solar cells?

You have full access to this open access article Titanium dioxide layers are the most popular electron transport layer (ETL) in perovskite solar cells. However most studies focus on mesoporous structure and application with organic-inorganic hybrid perovskite.

Why are perovskite solar cells important?

Perovskite solar cells (PSCs) have attracted tremendous attentions due to its high performance and rapid efficiency promotion. Compact layer plays a crucial role in transferring electrons and blocking charge recombination between the perovskite layer and fluorine-doped tin oxide (FTO) in PSCs.

Does perovskite atop TiO_2 improve photovoltaic performance?

While surface treatments of the compact TiO_2 layer are recognized as effective strategies to enhance the photovoltaic performance of perovskite solar cells, the discussion regarding the crystallinity of perovskite atop TiO_2 has been limited.

Is TiO_2 a potential ETL in perovskite solar cells?

Conclusion In conclusion, as a result of their outstanding electron mobility, high stability, and low cost, TiO_2 have become prominent as prospective ETLs in perovskite solar cells.

Cesium Titanium(IV) Bromide Thin Films Based Stable Lead-free Perovskite Solar Cells Min Chen, Ming-Gang Ju, Alexander D. Carl, Yingxia Zong, Ronald L. Grimm, Jiajun Gu, Xiao ...

The present study serves experimental and theoretical analyses in developing a hybrid advanced structure as a photolysis, which is based on electrospun Graphene Oxide ...

Transparent perovskite solar cells (PSCs) on the basis of these AgNWs and AgNWs/ TiO_2 hybrid top electrodes were made and examined. Due to the light scattering nature of TiO_2 ...

Titanium dioxide layers are the most popular electron transport layer (ETL) in perovskite solar cells. However most studies focuses on mesoporous structure and application with ...

Titanium dioxide layers are the most popular electron transport layer (ETL) in perovskite solar cells. However most studies focuses on mesoporous structure and application ...

Stability investigation of the titanium-based eco-friendly perovskite-like antiferroelectric Cs₂TiBr₆ ... Our work shows that the Cs₂TiBr₆ film has the potential for application in detectors, solar ...

Cesium titanium(IV) halide perovskites (HPs) are promising all-inorganic, Pb-free materials for perovskite solar cells (PSCs). Here we show that high-quality, uniform thin films of ...

Third-generation solar cells, such as polymer: fullerene, hybrid polymer, perovskite solar cells (PSCs), are solution-processable technologies with a foreseeable future ...

Solution processed high performance perovskite solar cells based on a silver nanowire-titanium dioxide hybrid top electrode December 2022 RSC Advances 12(54):35350 ...

Organic/inorganic metal halide perovskite solar cells (PSCs) have been diffusely explored in the past decades due to their prominent optoelectronic properties [1], [2], [3], ...

Article Cesium Titanium(IV) Bromide Thin Films Based Stable Lead-free Perovskite Solar Cells Min Chen,¹ Ming-Gang Ju,² Alexander D. Carl,³ Yingxia Zong,¹ Ronald L. Grimm,³ Jiajun ...
