

What is capacitor bank protection?

Capacitor bank protection products and systems provide complete primary and backup protection for all types of capacitor configurations. This relay protects grounded and ungrounded, single- and double-wye capacitor configurations and allows you to obtain full control of your capacitor banks.

How does a capacitor unbalance protection work?

The unbalance protection should coordinate with the individual capacitor unit fuses so that the fuses operate to isolate the faulty capacitor unit before the protection trips the whole bank. The alarm level is selected according to the first blown fuse giving an early warning of a potential bank failure.

How shunt capacitor banks affect power system performance?

Located in relevant places such as in the vicinity of load centers the use of SCBs has beneficial effect on power system performance: increased power factor, reduced losses, improved system capacity and better voltage level at load points. Shunt capacitor banks are protected against faults that are due to imposed external or internal conditions.

What is a substation capacitor bank?

Load and distributed generation characteristics have both changed to require increased VAR support throughout the power system. Substation capacitor banks are the most economical form of adding VARs to the system, yet because of harmonics, grounding, and operational concerns, there are many different types of capacitor banks.

What is the protection of shunt capacitor banks?

Protection of shunt capacitor banks is described in references [8.10.1] to [8.10.5]. Shunt capacitor banks (SCBs) are widely used in transmission and distribution networks to produce reactive power support.

Is there a one-size-fits-all solution to capacitor bank protection?

CONCLUSION The many variations in capacitor bank design mean there is no one-size-fits-all solution to bank protection. The basic concepts of short-circuit protection and element failure detection remain unchanged, regardless of bank design. We recognize that different protection types are useful for different conditions.
