

Who has delivered Western Australia's largest network-integrated battery energy storage system?

Pacific Energy has delivered Western Australia's largest network-integrated battery energy storage system as a part of Fortescue Metals Group's Pilbara Energy Connect project.

What's happening at Western Australia's biggest mines?

As battery technology evolves, Andrew Tunncliffe profiles some of the work being done to deploy the processes at some of Western Australia's biggest mines. A July 2021 aerial shot of Sandfire's solar farm supplying power to its DeGrussa Mine. Source: Sandfire

How can off-grid mining improve the environment?

For off-grid mining, renewable energy and storage technologies present an ideal opportunity not only to improve the mine's environmental footprint, but also reduce energy costs while improving power quality. We are seeing a strong drive to optimise energy across mines, including solutions for e-mobility and rapid charging.

What fuel do remote isolated Minerals mines use?

Mines rely on diesel and/or trucked Liquid Natural Gas (LNG) fuel for power generation. Remote isolated minerals mines contribute around 8 per cent of total mining emissions reported for Western Australia. The emissions profile for remote isolated minerals mines (Figure 4) is different

How can solar and wind energy be used in mining?

Solar and wind energy in combination with BESS are clear pathways for the energy transition in mining, while meeting energy production needs for long-term growth. The right integration of these different components is key to success. What lessons have been learned from operational storage projects for mines?

How much electricity does a mine use?

Mines total electricity consumption: 1.7 TWh. Trucked LNG 19%, Diesel (Electricity) 79%. The majority of greenhouse gas emissions from electricity generation for remote isolated mines are from gold mining (Figure 7). Electricity generation for battery and critical minerals operations (e.g. nickel and rare

Two large-scale battery storage systems which will charge from nearby solar to help power iron ore mining operations in Western Australia have been commissioned. Renewable energy company Hybrid Systems Australia, a ...

The Western Australian Government has granted Australian Vanadium's (ASX:AVL) namesake project Green Energy Major Project status. As such, the Australian ...

Alinta Energy said yesterday that it will build a 100MW/200MWh (2-hour duration) BESS at Wagerup Power

Station, a dual-fired 380MW gas and distillate generation ...

Outback powerpack: how battery storage could be the future of Western Australian mining. As battery technology evolves, Andrew Tunnickliffe profiles some of the work being done to deploy the processes at some of ...

Energy Utilisation is a priority theme under MRIWA's Net Zero Emission Mining (NZEM) focus area, with energy storage a critical enabler for decarbonisation of Western Australian mining ...

We designed, installed and commissioned 42MW of interconnected battery energy storage system (BESS) for Fortescue's Solomon (16MW) and North Star (26MW) mine sites, making it one of the world's largest network-connected ...

The push for the development of energy storage projects and supply chains is transforming contemporary energy landscapes [3], [4] and opening new resource frontiers. In ...

"Energy storage", according to a recent article posted on the Deloitte website, "is an issue at the heart of the transition towards a sustainable and decarbonised economy" (van ...

Energy solutions company Aggreko is expanding the solar farm and battery energy storage system (BESS) at Gold Fields" (JSE:GFI) Granny Smith Mine in Western Australia.. This ...

The Northern Goldfields Solar and Battery Storage Facility is one of the world's largest off-grid mining solar and battery energy storage systems and features about 70 000 ...

Bitcoin mining is extremely energy intensive, and bitcoin bashers have labelled the digital currency a climate villain. But as the FT's Scott Chipolina reports, one novel strategy being ...
