What is a 12V solar panel used for?

Let's explore some common uses: **Lighting:** LED lights are highly efficient and a perfect match for 12V systems. A 100W solar panel can easily power several LED lights for many hours each day. **Mobile Devices:** Charging smartphones, tablets, and laptops is well within the capabilities of most 12V solar systems.

How much energy does a 12V Solar System use?

In our example: $185\text{Wh} \times 3 = 555\text{Wh}$ or 46Ah for a 12V system. Select appropriate solar panel wattage: As a rule of thumb, your solar panel wattage should be at least 1.3 times your daily energy usage. In our example: $185\text{Wh} \times 1.3 = 240\text{W}$ of solar panels. As your energy needs grow, you can easily expand your 12V solar system.

Can a 12V solar panel be used with a 24v battery?

If you purchase a 12v solar panel you should pair it with a 12v battery (a 12 volt lithium battery will work best with the 12 volt solar panels), a 12v inverter, and at least a 12v charge controller. A 24v solar panel should be used with a 24v battery bank, 24v inverter, and at least a 24v charge controller.
