

What type of battery does a watch use?

Most watches use single use silver oxide batteries. Some watches use larger button cells. Rechargeable watch batteries are used in solar power and kinetic powered watches such as the Citizen Eco-Drive, Casio Solar Powered watches or Seiko Kinetic watches. Click the images below to find out more about identifying each battery type.

Can You DIY a watch battery?

If you decide to DIY the project, then remember that the new watch battery should follow the watch manufacturer's recommendations. However, you can replace alkaline batteries with silver-oxide watch batteries if your watch is compatible with both. For further details on the type of watch battery to use, locate the watch owner's guide.

Do all watches use the same battery?

Since all watches use a button cell battery (also known as coin cell batteries), it is easy to assume that one size fits all and all watches take the same battery. However, this is not the case and in fact, there are many different types of watch batteries.

What is a good battery size for a watch?

Regular maintenance and timely battery replacements can help minimize the risk of battery leakage in watches. The most common watch battery sizes are the SR626SW silver oxide battery and the CR1216 lithium battery.

Should you replace a watch battery?

The most important part of replacing batteries for watches is that if you are not sure of what you are doing, don't do it. It would be best if you took the watch to a repair shop for check-up and battery replacement. The batteries could be good for use but the watch might have developed other problems.

Are there any watches without a battery?

Good news... There are! There are a couple of different types of watches that don't need any batteries to operate at all, like a automatic and mechanical watches. There are also Kinetic and Eco-Drive watches that use a solar-powered battery, so to say they operate completely without a battery would be disingenuous.
